**Product Information**

**High Performance Building**

**Dow Corning® 993 Structural Glazing Sealant**

**FEATURES & BENEFITS**

- Meets European standard for structural glazing as developed by EOTA working groups
- Excellent adhesion to a wide range of substrates including coated, enamelled and reflective glasses, anodised and polyester paint coated aluminium and stainless steel
- High level of mechanical properties
- Odorless and non-corrosive cure
- Excellent stability through wide temperature range: -50°C to 150°C
- Resistant to ozone
- Stable viscosity for A & B components, no heating required
- Suitable for use in impact-resistant window systems in new construction and retrofit in existing buildings
- Structural capability
- The cured product exhibits excellent weathering characteristics, and a high resistance to ultra-violet radiation, heat and humidity
- Lot matching of base and curing agent not necessary
- Different gray shades available (please refer to our color card)

**APPLICATIONS**

- Two-part silicone sealant for structural glazing

**TYPICAL PROPERTIES**

Specification Writers: These values are not intended for use in preparing specifications. Please contact your local Dow Corning sales office or your Global Dow Corning Connection before writing specifications on this product.

**DESCRIPTION**

*Dow Corning® 993 Structural Glazing Sealant* is a two-component, neutral curing silicone formulation specifically developed for the structural bonding of glass, metal and other building components.

Neutral alkoxy; cures at room temperature giving off a small amount of alcohol.
TECHNICAL SPECIFICATIONS AND STANDARDS

**Dow Corning 993 Structural Glazing Sealant** combines excellent unprimed adhesion to a wide range of building substrates with high levels of physical properties over a wide range of temperature. It exhibits excellent retention of adhesive and mechanical properties after ageing as detailed by the EOTA Technical guide:

- 1000 hours exposure to ultraviolet radiation in hot water immersion (ISO 11431)*
- Resistance to salt spray (ISO 9227 NSS)*
- Resistance to SO$_2$ (ISO 3231)*
- Resistance to extreme temperature (ISO 8339)*

*CE Marked as structural glazing sealant component according to ETAG002, the European Technical Guidelines for structural glazing with a level of attestation of 1. (external quality audit) valid in all EC countries.

How to use

**Dow Corning 993 Structural Glazing Sealant** offers unprimed adhesion to most coated and uncoated glasses as well as most metal spacers. The sealant is compatible with **Dow Corning**® Neutral Curing Construction Sealants such as **Dow Corning**® 791 Silicone Weatherproofing Sealant, and **Dow Corning**® Neutral Curing Insulating Glass Sealants such as **Dow Corning**® 3362 HD Insulating Glass Sealant, as well as most commonly used glazing components. It is important when selecting components for a project that adhesion and compatibility tests are carried out, and found to be successful, before the project starts.

**Mixing and dispensing**

To obtain the ultimate physical properties from **Dow Corning 993 Structural Glazing Sealant** it is recommended that the base and curing agent are thoroughly mixed using an airless mixing system found on most existing commercially available two-part silicone dispensing machines. Only special, two part hand mixed cartridge systems endorsed by Dow Corning should be used to avoid incorporation of air into the material.

**Dow Corning 993 Structural Glazing Sealant** should be mixed in a ratio of 10:1 base to curing agent by weight, or equivalent 7.8:1 by volume for optimal properties. At this mix ratio, the sealant typically exhibits a working time of 10-30 minutes and allows units to be handled within two hours. Small variations in mixing ratio can be tolerated, but these should not exceed 11:1 to 9:1 by weight or 8.9:1 to 7.3:1 by volume to ensure minimum properties are obtained.

Lot matching of **Dow Corning 993® Base** and **Dow Corning 993® Curing Agent** is not required. Before use it is recommended that the curing agent be stirred to ensure homogeneity of all components. **Dow Corning 993 Curing Agent** will react with atmospheric moisture and therefore should not be exposed to air for prolonged periods of time.

Different catalysts are available for **Dow Corning 993 Structural Glazing Sealant**:

- **Dow Corning 993® Structural Glazing Catalyst** is a medium viscosity paste, fast cure, which is suitable for meter mix equipment using a pressure pot or follower plate system for the catalyst.
- **Dow Corning 993® HV/GER Structural Glazing Catalyst** is a viscous paste, fast cure, which is suitable for meter mix equipment that uses a follower plate system for the catalyst.

**Preparatory work**

Clean all joints and glazing pockets, removing all foreign matter and contaminants such as grease, oil, dust, water, frost, surface dirt, old sealants, or glazing compounds and protective coatings.

Metal, glass and plastic surfaces should be cleaned by mechanical or solvent procedures. Where used, solvent should be wiped on and off with clean, oil- and lint-free cloths.

**Priming**

Priming is not usually required when using **Dow Corning 993 Structural Glazing Sealant**. However, it is essential that adhesion be tested prior to use. Specific primer recommendations will be made by Dow Corning Technical Services Department on a project basis. Please contact Dow Corning for further advice.

**Masking and tooling**

Areas adjacent to joints may be masked to ensure a neat sealant line. Do not allow masking tape to touch clean surfaces to which the silicone sealant is to adhere. Tooling should be completed in one continuous stroke within 5 minutes after sealant application. Masking tape should be removed immediately after tooling.

**Equipment cleaning**

When not being used it is recommended that the dispensing equipment be purged either with the base component, or flushed with a suitable solvent such as **Dow Corning® 3522 Concentrated Cleaning Solvent**. If cured sealant has built up inside the equipment, flush the equipment for the appropriate time with **Dow Corning 3522 Concentrated Cleaning Solvent**, using a solvent recirculation system. This solvent dissolves cured silicone sealant and provides optimum cleaning performance.

**MAINTENANCE**

No maintenance is needed. If sealant becomes damaged, replace damaged...
Dow Corning 993 Structural Glazing Sealant will adhere to compatible cured silicone sealant which exhibits a clean knife-cut or abraded surface.

HANDLING PRECAUTIONS
PRODUCT SAFETY INFORMATION REQUIRED FOR SAFE USE IS NOT INCLUDED IN THIS DOCUMENT. BEFORE HANDLING, READ PRODUCT AND MATERIAL SAFETY DATA SHEETS AND CONTAINER LABELS FOR SAFE USE. PHYSICAL AND HEALTH HAZARD INFORMATION. THE MATERIAL SAFETY DATA SHEET IS AVAILABLE ON THE DOW CORNING WEBSITE AT DOWCORNING.COM, OR FROM YOUR DOW CORNING SALES APPLICATION ENGINEER, OR DISTRIBUTOR, OR BY CALLING DOW CORNING CUSTOMER SERVICE.

PACKAGING INFORMATION
Dow Corning 993 Base is available in 250 kg drums and 20 liter pails.

Dow Corning 993 Curing Agent is available in 25 kg pails.

Beside black and clear, the curing agent is offered in a variety of gray shades. Custom colors may be available on request. Please refer to our color card (ref. 62-1633).

LIMITATIONS
This product is neither tested nor represented as suitable for medical or pharmaceutical uses.

HEALTH AND ENVIRONMENTAL INFORMATION
To support Customers in their product safety needs, Dow Corning has an extensive Product Stewardship organization and a team of Product Safety and Regulatory Compliance (PS&RC) specialists available in each area.

For further information, please see our website, dowcorning.com or consult your local Dow Corning representative.

LIMITED WARRANTY INFORMATION – PLEASE READ CAREFULLY
The information contained herein is offered in good faith and is believed to be accurate. However, because conditions and methods of use of our products are beyond our control, this information should not be used in substitution for customer’s tests to ensure that our products are safe, effective, and fully satisfactory for the intended end use. Suggestions of use shall not be taken as inducements to infringe any patent.

Dow Corning’s sole warranty is that our products will meet the sales specifications in effect at the time of shipment.

Your exclusive remedy for breach of such warranty is limited to refund of purchase price or replacement of any product shown to be other than as warranted.

DOW CORNING SPECIFICALLY DISCLAIMS ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY.

DOW CORNING DISCLAIMS LIABILITY FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES.
